***Information Disclosure Statement***

1. The information disclosure statement filed 4/9/04 fails to comply with 37 CFR 1.98(a)(3) because it does not include a concise explanation of the relevance, as it is presently understood by the individual designated in 37 CFR 1.56(c) most knowledgeable about the content of the information, of each patent listed that is not in the English language. It has been placed in the application file, but the information referred to therein has not been considered.

***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:  

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
3. Claims 1 to 17 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
4. The use of the phrase "and/or" renders the claims indefinite because it is unclear which embodiment is being claimed. It appears to be an attempt to claim two inventions in a single claim.

***Claim Rejections - 35 USC § 102***

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:  

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1 to 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Dearnaley et al. (GB 2 163 598 A).

Dearnaley et al. show all aspects of the instant invention (e.g. Figures 1 and 2) including:

- a cooling element **1**
- a substrate **6** arranged on said cooling element and comprising a semiconductor component
- a module housing comprising first (unlabeled lid on substrate) and second **15** housing parts
- a resilient, recess area **16** which is integral material components of the second part and applies a spring force to the first part
- pressing stamps (that area of the first housing part which is contact with the substrate) which act on the substrate circumferentially on the edge area of the substrate

### **Conclusion**
